

Anatomy And Physiology Special Senses Answer Key

Anatomy And Physiology Special Senses

The functions of the five special senses include: Vision. Sight or vision is the capability of the eye(s) to focus and detect images of visible light on photoreceptors in the retina of each eye that generates electrical nerve impulses for varying colors, hues, and brightness.

Special Senses Anatomy and Physiology - Nurseslabs

All human awareness and knowledge is due to detection interpretation of stimuli. Some of the stimuli is received by sensory receptors present in the body. Other stimuli is received by highly complex receptor organs which are referred to as the special senses. The special senses are the senses that have specialized organs devoted to them.
