In the diagram shown below, the convex surface is the front of the mirror. The radius of the "mylar beach ball" is behind the mirror and is represented by the length of the line VC where V is the vertex of our convex mirror and C is the center of our ball. The focal length, f , is half of the radius, or the length of the line VF. F is called the focal point.

PhysicsLAB: Spherical Mirrors

For flat mirrors the Law of Plane Mirrors states that "the image is always the same distance behind the mirror as the object is in front of the mirror." The image, I, and the object, O, always line up along the same normal. The image is upright, but left-right reversed.

This collection of interactive simulations allow learners of Physics to explore core physics concepts by altering variables and observing the results. This section contains more than 70 simulations and the numbers continue to grow.
