Best Answer: The goal of every geometry student is to be able to eventually put what he or she has learned to use by writing geometric proofs. Throughout the Notes under Geometry 1 and 2 we have gained the knowledge to know what is and isn't true of a given geometric figure and why. The two major ways to prove a conclusion are by direct proof and by indirect proof.

2 Day 1 - Using Coordinate Geometry To Prove Right Triangles and Parallelograms Proving a triangle is a right triangle Method 1: Show two sides of the triangle are perpendicular by demonstrating their slopes are opposite reciprocals. Method 2: Calculate the distances of all three sides and then test the Pythagorean's theorem to show the three lengths make the Pythagorean's theorem true.

This addition made such a difference! By the time the Geometry proofs with diagrams were introduced, the class already knew how to set up a two-column proof, develop new equations from the given statements, and combine two previous equations into a new one. Check out this sample proof to see what I'm talking about:
