1. Introduction. Currently researchers are increasingly recognizing the effect that motor skills have on other areas of development, such as social cognition and language (Leonard & Hill, 2014). The emergence of new motor skills changes infants' experience with objects and people in ways that are relevant for both general communicative development and the acquisition of language (Iverson, 2010).

Evidence suggests that stressful experiences might affect diabetes, in terms of both its onset and its exacerbation. In this article, the authors review some of this evidence and consider ways in which stress might affect diabetes, both through physiological mechanisms and via behavior. They also discuss the implications of this for clinical practice and care.

Repetition is important in music, where sounds or sequences are often repeated. It may be called restatement, such as the restatement of a theme. While it plays a role in all music, with noise and musical tones lying along a spectrum from irregular to periodic sounds, (Moravcsik, 114) (Rajagopal, [page needed]) it is especially prominent in specific styles.

So argued the celebrated political activist Noam Chomsky and his sidekick Edward S. Herman in *After the Cataclysm*, one of the most supportive books of the Khmer revolution (especially since it was written after the end of the Pol Pot-leng Sary regime), yet least rejected among the works canonized, to originate from the standard total academic view on Cambodia.
