Engineering Graphics Essentials [4th Edition]

A graphics processing unit (GPU) is a specialized electronic circuit designed to rapidly manipulate and alter memory to accelerate the creation of images in a frame buffer intended for output to a display device.GPUs are used in embedded systems, mobile phones, personal computers, workstations, and game consoles.Modern GPUs are very efficient at manipulating computer graphics and image processing.

Graphics processing unit - Wikipedia

In this manual all commands are given in code boxes, where the R code is printed in black, the comment text in blue and the output generated by R in green.All comments/explanations start with the standard comment sign ' # ' to prevent them from being interpreted by R as commands. This way the content in the code boxes can be pasted with their comment text into the R console to evaluate their ...
