Physics Classroom Mathematics Of Curved Mirrors Answers

If the mirror has a focal length of 19.2 cm, then what is the image height and image distance? 2. Van ltee, quite concerned about the pimple on his chin, is looking into a concave mirror with a focal length of 33.6 cm. Determine the image height and image distance of the 2.50-mm sized pimple when placed 25.2 cm from the mirror. 3.

Mathematics of Curved Mirrors - physicsclassroom.com

The image size is also negative for a virtual image, but you say the magnitude if the size is the question. The real image is at the reflecting side of a mirror. In case of a lens, the real image is at the opposite side of the lens as the object. The focal length of a concave mirror is positive, that of a convex one is negative.

Curved Mirror mathematics? | Physics Forums

MOP Connection: Reflection and Mirrors: sublevels 7 and 10 Use the mirror equation and the magnification ratio to solve the following problems. PSYW 1. Bobby places a 4.25-cm tall light bulb a distance of 36.2 cm from a concave mirror. If the mirror has a focal length of 19.2 cm, then what is the image height and image distance? 2.

Mathematics of Curved Mirrors - jfindlay.ca

The Mirror Equation - Concave Mirrors. Ray diagrams can be used to determine the image location, size, orientation and type of image formed of objects when placed at a given location in front of a concave mirror. The use of these diagrams was demonstrated earlier in Lesson 3. Ray diagrams provide useful information about object-image...

The Mirror Equation - Concave Mirrors

Best Answer: Firstly, the mirror must be concave; a convex mirror will produce a virtual image which is smaller than the object. Next, for a concave mirror to produce a Virtual image the object distance must be less than the focal length (f), so f must be greater than 15cm Finally, for a spherical mirror ...

Physics Questions (More Mirrors)? | Yahoo Answers

Reflection Using Mirrors Answer Key. Instructions: Read each question carefully. Choose the answer that best fits the question. Short answer response questions must be responded to in complete sentences. If the question involves calculations, you must show all your math work.

Reflection Using Mirrors Answer Key - HelpTeaching.com

Best Answer: convex and concave. Convex are like rear view mirrors or the mirrors on the front of a school bus. They always make images that are virtual, upright (erect), and reduced. Concave mirrors are like the mirror in a makeup kit where one mirror gives you your regular reflection but

the other mirror ...

what r curved mirrors?give one example? | Yahoo Answers

And the answer is, yes! Curved mirrors like convex and concave mirrors do follow this law. Or at least they do in a way... this happens when you make a certain approximation - that if you zoom in really really close on a curved mirror, it's basically flat. In math terms, this is saying that a curved surface is "locally linear".

Q & A: Curved Mirrors and the Law of Reflection ...

Mirrors, unlike lenses, are not transparent materials, but instead are polished surfaces that reflect incoming light rays. Mirrors can be plane (flat) or spherical (curved). All mirrors obey the laws of reflection: The incident ray, the reflected ray and the normal at the point of incidence all lie on the same plane.

Mathematics (from Greek μάθημα *máthēma*, "knowledge, study, learning") includes the study of such topics as quantity, structure, space, and change. Mathematicians seek and use patterns to formulate new conjectures; they resolve the truth or falsity of conjectures by mathematical proof. When mathematical structures are good models of real ...

Mathematics - Wikipedia

A curved mirror is a mirror with a curved reflecting surface. The surface may be either convex (bulging outward) or concave (recessed inward). Most curved mirrors have surfaces that are shaped like part of a sphere, but other shapes are sometimes used in optical devices.
