

## *Modern Phylogenetic Taxonomy Answer Sheet*

### **Modern Phylogenetic Taxonomy Answer Sheet**

By the early 21st century, vertebrate paleontologists were beginning to adopt phylogenetic taxonomy, in which all groups are defined in such a way as to be monophyletic; that is, groups include all descendants of a particular ancestor. The reptiles as historically defined are paraphyletic, since they exclude both birds and mammals. These respectively evolved from dinosaurs and from early ...

In common usage, the word "human" generally refers to the only extant species of the genus Homo—anatomically and behaviorally modern Homo sapiens.. In scientific terms, the meanings of "hominid" and "hominin" have changed during the recent decades with advances in the discovery and study of the fossil ancestors of modern humans. The previously clear boundary between humans and apes has ...

In biological terms, a human being, or human, is any member of the mammalian species Homo sapiens, a group of ground-dwelling, tailless primates that are distributed worldwide and are characterized by bipedalism and the capacity for speech and language, with an erect body carriage that frees the hands for manipulating objects. Humans share with other primates the characteristics of opposing ...

Predator or Scavenger One of the most controversial theories about Tyrannosaurus is if it was actually a predator at all, but instead lived the life of a scavenger. Some have said that its size, even when combined with lower weight estimates meant that it could not run, as in both feet off the ground at the same time. Biomechanical studies have also shown that it ...
