Newton's first law of motion predicts the behavior of objects for which all existing forces are balanced. The first law - sometimes referred to as the law of inertia - states that if the forces acting upon an object are balanced, then the acceleration of that object will be 0 m/s/s. Objects at equilibrium (the condition in which all forces balance) will not accelerate.

$K = ^\circ\text{C} + 273$ $F = ^\circ\text{C} \times 1.8 + 32$ Pressure, simple mercury barometer. Pressure is the force exerted over an area: $P = F/A$ Due to gravity, the atmosphere exerts a pressure of 101 kPa at sea level.

Phases and Phase Equilibria - MCAT Review

Ask most chemists who discovered the periodic table and you will almost certainly get the answer Dmitri Mendeleev. Certainly Mendeleev was the first to publish a version of the table that we would recognise today, but does he deserve all the credit?

Development of the periodic table - Royal Society of Chemistry

The periodic table, also known as the periodic table of elements, is a tabular display of the chemical elements, which are arranged by atomic number, electron configuration, and recurring chemical properties. The structure of the table shows periodic trends. The seven rows of the table, called periods, generally have metals on the left and non-metals on the right.

Chemistry 11 Answer Key - Vancouver School Board

From their very first day in school, students should be actively engaged in learning to view the world scientifically. That means encouraging them to ask questions about nature and to seek answers, collect things, count and measure things, make qualitative observations, organize collections and observations, discuss findings, etc. Getting into the spirit of science and liking science are what ...
