Classical physics refers to theories of physics that predate modern, more complete, or more widely applicable theories. If a currently accepted theory is considered to be modern, and its introduction represented a major paradigm shift, then the previous theories, or new theories based on the older paradigm, will often be referred to as belonging to the realm of "classical physics".

x Epidermal cells are positioned on the most out layer of skin and thus have the potential risk of being exposed to environmental factors. The biological effect of ionizing radiation (IR) on the skin tissue is a significant problem for medical applications, such as radiotherapy for cancer treatment.

What is a plasma spark and how does it differ from a standard ignition spark? Does the extremely bright light or Photonic energy liberated by the plasma spark actually combust fuel or is it wasted energy as opposed to a standard spark generated by an MSD box?

Cloud physics is the study of the physical processes that lead to the formation, growth and precipitation of atmospheric clouds. These aerosols are found in the troposphere, stratosphere, and mesosphere, which collectively make up the greatest part of the homosphere. Clouds consist of microscopic droplets of liquid water (warm clouds), tiny crystals of ice (cold clouds), or both (mixed phase ...

The Cornell NanoScale Science & Technology Facility (CNF) has served the US research community for more than 25 years. Subjects of research encompass physical sciences, life sciences, and engineering, particularly with inter-disciplinary emphasis. During 2002, nearly 350 Cornell University and 350 external users utilized the fabrication, synthesis, characterization, and integration resources ...

Fighting cancer can be compared to fighting a house fire. For example, suppose you had a house fire and the fire was in three rooms and spreading quickly. Suppose you called the fire department and a single person, in a single car, arrived with a squirt gun. You would not be very happy. Like the ...

Interstitial fluid and the lymph it subsequently forms is enriched in discoidal HDL (~5-10 nm Stokes radius). The skin is also one of the body's largest reservoirs of extravascular interstitial fluid (Aukland and Reed, 1993) and contains a large pool of the total body HDL (Randolph and Miller, 2014). We thus wondered how HDL recirculation from the interstitium to lymph and then plasma was ...

Welcome to Chips & Tips - a unique and regularly updated forum for scientists in the miniaturisation field from Lab on a Chip. Chips & Tips aims to provide a place where ideas and solutions can be exchanged on common practical problems encountered in the lab, which are seldom reported in the literature. Do you. have problems with bubble formation when injecting your sample?

The second problem is that not all the energy from the blast is dangerous. Some of it is in the form of neutrinos, which are utterly harmless (you know, those slippery little customers who can fly through one light year of solid lead like nothing is there).. First off, a particle will only annihilate with the corresponding anti-particle. This means if an electron hits an anti-proton, they will ...
