Electromagnetism. These practical activities range from simple field patterns of bar magnets through to the laws of electromagnetic induction. We also include engineering applications of magnetism, such as the variety of clever electromagnetic machines used everywhere in industrial societies.

Substances which have the property of attracting small pieces of iron, nickel, cobalt, etc., are called magnets. A magnet has two poles - north pole and south pole. Like poles repel, while unlike poles of magnets attract each other. The region surrounding a magnet, in which the force of the magnet can be detected, is said to have a magnetic field.

A "Starter" is another name for the large power relay used to conduct current to the motor lines. Starters are also known as contactors, and are usually labeled with the letter "M" in ladder diagrams.. Notes: Ask your students to identify any motor control circuit diagrams they've already seen as being "across-the-line."

Aerodynamics, from Greek  $\alpha\eta\rho$  aer (air) + δυναμική (dynamics), is the study of motion of air, particularly as interaction with a solid object, such as an airplane wing. It is a sub-field of fluid dynamics and gas dynamics, and many aspects of aerodynamics theory are common to these fields. The term aerodynamics is often used synonymously with gas dynamics, the difference being that ...

1. Introduction. Individuals are exposed to different messages about the nature of abilities on an everyday basis, from the teacher comforting a student ("It's OK, not everyone can be a math person"), to the parent praising a child ("You really are a smart boy"), to the sports announcer commenting on a player's skill ("Wow, what a natural!").
